No longer are you restricted to one way control of lower-end systems, you can now get full 2 way control with feedback from your home automation devices, even if you don't have a Crestron or AMX system. CommandFusion has introduced the ability to parse feedback from ANY ethernet system, using the power of regular expressions.

So now you can use commands, macros and feedback parsing to control your hardware and view feedback directly on your iPhone or iPod Touch.

The new releases also introduce a number of new features, so please check the [release notes for iViewer](#) in our new wiki, and the [release notes for guiDesigner](#) (PDF).

Our [wiki](#) has just been released to the public and is full of all kinds of helpful information. We are adding new content daily, and hope that many of our loyal customers will add their two cents to the wiki as well.
