Our home automation iPhone app, [CF iViewer version 2.0](#) has been released today on the App Store. This update adds many new features and fixes including:

- Dynamic, scrolling list support
- Custom command sending via TCP/UDP
- Sound playback on digital join events
- ‘Clickthrough’ mode for subpages and image elements
- Launch safari browser to defined URL on button press
- Many minor bug fixes

To implement these new features, you will need a new version of guiDesigner, which is just undergoing some last minute fixes before its public release. So please hang in there and watch this space for an announcement.
