« [iViewer v1.0.1 released in AppStore](#)

[iViewer Crestron demo program updated](#) »

iViewer v1.0.2 has just been released via the Apple AppStore and brings with it increased connection stability. This is the second update in as many weeks, demonstrating our commitment to provide a high end control solution for the iPhone and iPod Touch.

The main fix in this release relates to reconnection issues when waking devices from sleep. Please report any further issues via our Google Group - <http://groups.google.com/group/commandfusion>
