Search

CommandFusion guiDesigner, our windows software for creating customized user interfaces for our iPhone and iPod Touch home automation application iViewer, has reached it's first major update since launching back in August 2008.

Version 2.0 brings with it a whole range of changes, including:

- Docking panels - customize the application to suit your preference.
- Command & Macro support
- Sound Manager
- Online update checker
- Many usability updates

Check the release notes for more information on the new version.

As always, guiDesigner requires the .NET 2.0 Framework to be installed.

Download guiDesigner 2.0, and the updated iViewer User Guide PDF from our Downloads Page to get started.
